Optical Fiber Telecommunications Volume VIA, Sixth Edition: Components And Subsystems (Optics And Photonics)

Synopsis

Optical Fiber Telecommunications VI (A&B) is the sixth in a series that has chronicled the progress in the R&D of lightwave communications since the early 1970s. Written by active authorities from academia and industry, this edition brings a fresh look to many essential topics, including devices, subsystems, systems and networks. A central theme is the enabling of high-bandwidth communications in a cost-effective manner for the development of customer applications. These volumes are an ideal reference for R&D engineers and managers, optical systems implementers, university researchers and students, network operators, and investors. Volume A is devoted to components and subsystems, including photonic integrated circuits, multicore and few-mode fibers, photonic crystals, silicon photonics, signal processing, and optical interconnections. All the latest technologies and techniques for developing future components and systems Edited by two winners of the highly prestigious OSA/IEEE John Tyndal award and a President of IEEE's Lasers & Electro-Optics Society (7,000 members) Written by leading experts in the field, it is the most authoritative and comprehensive reference on optical engineering the market

Customer Reviews

Content is relevant but I am having an issue with the figures contained in the book. The graphs were authored as multi-color in many places and illustrate important concepts, I can however not view the

graphs as they are not color! Additionally the book actually refers to it's digital versions to obtain the color figures but those didn't come with this purchase. A hundred dollar book but it doesn't have color graphs? Update: Publisher does not have access to the color figures! They will not provide the pdf without additional cost (even though they refer to the color figures in their figure descriptions). Avoid this book in printed form. Customer Service was a failure.
