Aviation Maintenance Technician Handbook-Airframe - Volume 2 (FAA-H-8083-31)

Synopsis

The Aviation Maintenance Technician Handbookâ “Airframe (FAA-H-8083-31) is one of a series of three handbooks for persons preparing for certification as an airframe or powerplant mechanic. It is intended that this handbook provide the basic information on principles, fundamentals, and technical procedures in the subject matter areas relating to the airframe rating. It is designed to aid students enrolled in a formal course of instruction, as well as the individual who is studying on his or her own. Since the knowledge requirements for the airframe and powerplant ratings closely parallel each other in some subject areas, the chapters which discuss fire protection systems and electrical systems contain some material which is also duplicated in the Aviation Maintenance Technician Handbookâ “Powerplant (FAA-H-8083-32). This volume contains information on airframe construction features, assembly and rigging, fabric covering, structural repairs, and aircraft welding. The handbook also contains an explanation of the units that make up the various airframe systems. Because there are so many different types of aircraft in use today, it is reasonable to expect that differences exist in airframe components and systems. To avoid undue repetition, the practice of using representative systems and units is carried out throughout the handbook. Subject matter treatment is from a generalized point of view and should be supplemented by reference to manufacturer's manuals or other textbooks if more detail is desired. This handbook is not intended to replace, substitute for, or supersede official regulations or the manufacturerâ ™s instructions.

A tech manual

Thanks!

Right on!

Covers the basics okay. For a govt publication it is okay. Would recommend this book to other Techs for informational purposes.

I ordered this book thinking it was printed by Aircraft technical Book Company - ITS NOT! Here is how to tell A) The cover is missing a subject index (white rectangle middle left lower corner), B) the B&W version has no text on spine or back cover, C) it says it was published in San Bernardino, CA made in the USA on the back cover - The color version is printed in Canada, D) the B&W version has an isbn 9781490427874 the color version is ISBN 978-0-98386582-7 E) page V on B&W says it was "published by the United states department of transportation the color version says on page II developed by the united states and published by Aircraft Technical book company" F) The cover images are fuzzy and crisp and sharp on the color version. With a specialized technical manual COLOR IS KING! complex charts, graphs, pictures need to be clear. made in right but I lost two weeks with the re-order shipping hassle.
